

COVID-19 CONDUITE A TENIR ETUDIANT(E)S

Version 25-nov-2020

Author : Bruno Chabanas, MD
(coronavirus.ssu@uca.fr)

I am a "contact case" of a Covid-19 positive person

I have been in close contact with a Covid-19 positive person :

- Either the **CPAM and/or SSU has contacted me** as a confirmed "contact case" at risk ?
- Either I check if I **match the "contact case at risk" definition** (*see opposite) ?

I am a "contact case" of a person suspected to be positive or a person waiting for a test result

I do not have to follow special measures except sanitary barriers like everyone

If I become symptomatic, I follow the "symptomatic" guidance

I have been tested Covid-19 positive in the past ?

Yes, in the last two months

Yes, more than two months ago

I ask my doctor's opinion

No

- I **do not come to the Uni** until the result of the test. I isolate myself from others at home, I avoid any collective activity, I wear a face mask anytime I am not alone

- If I am a UCA student : I report myself using this online form : <https://covid-19.uca.fr/etudiant-et-usager/formulaire-de-signalement-covid-19/>

- If I am a non-UCA student : I inform the administration of my formation and I report myself by email at signalement.covid@uca.fr precising : name, surname, phone, school/department (TD/TP groups), accomodation (shared? CROUS?), if I already had a positive COVID-19 test in the past (if yes, when), if I am symptomatic (if yes, since when), the identity of the primary case if he/she is a student (and with his/her consent), the description of the situation at risk of viral transmission.

- If the CPAM (Assurance Maladie) called my as a "contact case", I can collect for free at a pharmacy some surgical masks during 14 days.

I am symptomatic

I am asymptomatic

See the guidance "**I have symptoms compatible with COVID-19**"

I live in the same accomodation than the positive person

PCR test only, no antigen test for asymptomatic contact case*

I do not live in the same accomodation than the positive person

I make an appointment to get quickly tested (PCR) at a laboratory : <https://sante.fr/recherche/trouver/DepistageCovid>

I make an appointment to get quickly tested (PCR) at a laboratory : <https://sante.fr/recherche/trouver/DepistageCovid>

Negative PCR

Positive PCR

Positive PCR

Negative PCR

I inform signalement.covid@uca.fr

I stay isolated as long as the positive person is isolated and for 7 days after her or his healing (or end of isolation).
+ I have to proceed to another test 7 days after the healing (or end of isolation) of the case.

Positive PCR

I fill in a new form (click here) or send an email to signalement.covid@uca.fr and I follow the "**I am Covid-19**" guidance

I inform signalement.covid@uca.fr

I stay isolated 7 days after the last contact at risk with the positive person

Negative PCR

I can return to the Uni

*I am a "contact case at risk" if I match the three criteria **1), 2) and 3)** :

1) If my contact with a person Covid-19 positive (PCR or antigen test) occurred from the 2 days before her or his symptoms onset, or from the 7 days before the test (if he or she is asymptomatic)

+

2) And if the contact DID NOT occur :

- with a **surgical mask** (of AFNOR category 1 tissue mask or FFP2) worn **either by you, or by the positive case**
- with a tissue mask (AFNOR category 2 or unknown) worn **both by you and the positive case**

+

3) ...and in such a situation :

- Same class or workgroup
- Shared living place (accomodation, shared kitchen, etc.)
- Direct contact, facing each other from less than one meter, whatever its duration (except fleeting contact in public space ...)
- Acts of hygiene or care received or provided
- Shared confined space without physical distancing (office, meeting room, personal vehicle, locker rooms, sports or show room, etc.) for at least 15 minutes accumulated over 24 hours with the case, or having remained face to face with the cases during several episodes of coughing or sneezing.

IMPORTANT

- Do not proceed to any supplementary diagnosis test after the first positive one (it can stay positive beyond the contagious period, for days or weeks)
- You **DO NOT** have to ask for any medical certificate such as a healing certificate : the isolation is only guided by criteria and procedures developed here.

*except for mass screening actions
